

Skladon doubles its e-shop fulfillment center

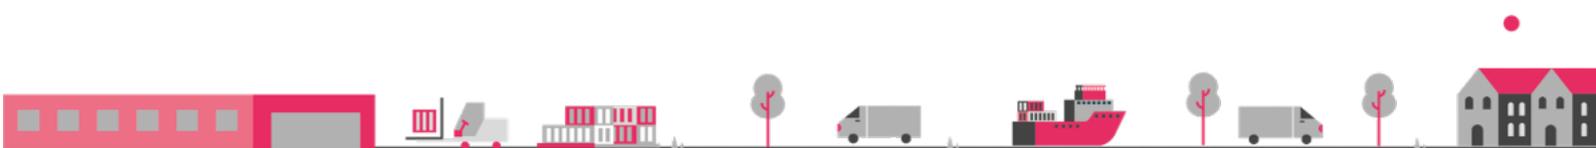

Mošnov, February 12, 2021 – The logistics company Skladon, which takes care of complete warehouse logistics for e-shops and manufacturing companies selling goods online, has officially expanded the premises of its distribution center. In the industrial zone near Ostrava Airport, it now has 10,000 sq m available for its e-commerce clients, ie twice the existing area. Skladon thus continues to increase its capacity for providing fulfillment services.

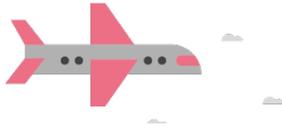

"We have been preparing for the expansion since the first quarter of last year. Due to our and also the overall growth of e-commerce, we realized that it would be necessary to increase storage capacity for the Christmas peak of the 2020 season," says Konstantin Margaretis, CEO of Skladon.

The global coronavirus pandemic has made a significant impact on consumer online shopping. *"The previous year was extremely challenging for all online marketers. We already know that many of them deal with the development, optimization and automation of their logistics departments. That is why it is very likely that the capacity of our center will be further increased during this year. We are already talking intensively about this option and we are glad that growth in our area is still possible,"* Margaretis adds next plans.

Logistics outsourcing is an increasingly preferred option for e-shops in the Czech Republic, following the example of Western Europe and especially the USA. *"Our clients often perceive logistics as a necessary part of their business, but it does not bring them any profit. Outsourcing logistics frees their hands and offers them the opportunity to invest their time and energy in other areas of business, such as sales or marketing,"* explains the main reasons for looking for Skladon's services Patrik Babinec, its CBO. *"I also see the expansion of the warehouse as an important step in gaining more clients,"* concludes Patrik Babinec.

Skladon was founded by Konstantin Margaretis and Patrik Babinec in 2015 after winning the Brilliant Young Entrepreneurs startup competition. Later, the third of the founders, Miloš Halecký, also joined them. The following year, they opened the first warehouse and began providing fulfillment services for the first clients. With the gradual expansion, they also started to develop their own application, which makes it easier for clients to orientate themselves and work with stocks, orders, returns or complaints. Thanks to the ever-growing demand, they approached a comprehensive solution of fulfillment services and created a modern facility in the industrial hall in the village of Mošnov next to the Ostrava Airport with a current area of 10,000 sq m.
